PROFESSIONAL SUMMARY

Full-stack developer in training with three years in trust and safety and operations, now technical lead of a 4-developer team building React/FastAPI/PostgreSQL applications and computer-vision services. Trained and integrated a YOLO defect-detection model into the team's construction compliance platform, and review and merge the team's pull requests. Course completes 6 November 2026.

CORE COMPETENCIES

Technical Skills: Python, JavaScript (ES6+), SQL, React, Vite, FastAPI, RESTful API design, PostgreSQL, SQLAlchemy ORM, MongoDB, JWT authentication, bcrypt, Role-Based Access Control (RBAC)

AI & Machine Learning: PyTorch, TensorFlow, scikit-learn, YOLO (Ultralytics), OpenCV, CNN, LSTM, LangChain, LangGraph, Retrieval-Augmented Generation (RAG), Google Gemini API, pandas, NumPy

Tools & Platforms: Git, GitHub, Vercel, Swagger/OpenAPI, Jupyter, Google Colab, Label Studio, Tailwind CSS, code review, pull-request workflow, Agile collaboration

PROFESSIONAL EXPERIENCE

Trust and Safety Associate | Accenture | Kuala Lumpur, Malaysia | Apr 2024 – Mar 2026

- Earned promotion to Tier 2 Support Agent within 12 months by resolving escalations beyond Tier 1 scope and mentoring junior agents on queue procedure.
- Executed urgent livestream takedowns within a strict 15-minute SLA by triaging high-priority queues for a major video streaming client.
- Improved queue handling efficiency by identifying process gaps and delivering policy revisions adopted into official execution guidelines.

Process Executive | Cognizant | Kuala Lumpur, Malaysia | Sep 2022 – Sep 2023

- Achieved 98% fact-checking accuracy across digital content by applying compliance and quality standards to every review.
- Reduced overall case turnaround time by 15% by resolving escalated cases and removing recurring bottlenecks.
- Standardised team output by updating operational workflows and process documentation.

Assistant Engineer | ALC Tech (M) Sdn Bhd | Kepong, Malaysia | Oct 2021 – Aug 2022

- Restored equipment and workstation uptime by providing IT troubleshooting to staff and performing scheduled machinery maintenance.

PROJECTS

Defect Detection Service (Pantau AI) | Python, Ultralytics YOLO, FastAPI, PostgreSQL

- Trained and integrated a YOLO object-detection model that identifies five construction defect classes (crack, abscission, bulge, corrosion, leakage) from uploaded site photographs.
- Loaded model weights once at application startup rather than per request, keeping checkpoint reads out of the inference path.
- Built an inspector verification endpoint allowing a qualified human to override model-assigned severity.

Pantau AI Platform (Capstone, Technical Lead) | React, FastAPI, PostgreSQL, SQLAlchemy, JWT

- Lead a four-developer team (Garuda Qualities) as technical lead, reviewing and merging the team's pull requests to keep the main branch release-ready.
- Implemented JWT authentication with bcrypt hashing and server-side role-based access control across the platform's relational schema.
- Delivered NCR tracking, SLA timers and contractor quality-risk scoring for defect lifecycles between main contractors and subcontractors.

EDUCATION & CERTIFICATIONS

Certificate in AI & Cloud for Construction, Cohort 1 (in progress) | Jun 2026 – 6 Nov 2026

CENTEXS Kuching Campus (Gamuda Technologies x CENTEXS Sarawak), Sarawak, Malaysia

Diploma in Industrial Electronics (Mechatronics Engineering) | 2018

German-Malaysian Institute, Bangi, Selangor, Malaysia
